

How to update the firmware for the WiFi Phone for Skype

Summary

How to update the firmware for the WiFi Phone for Skype (WSKP100) via USB cable and software

Introduction

The following steps show you how to update the firmware for your Wi-Fi Phone for Skype with USB utility available for download at

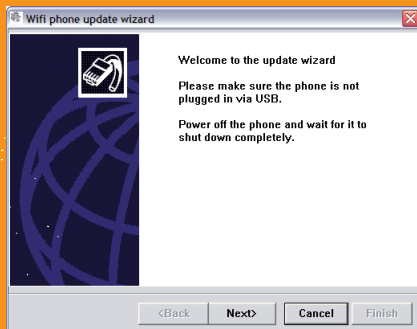

www.fon.com/en/download

Once you have downloaded the firmware, start the application by executing the downloaded file, and then follow the instructions on the screen carefully.

Please follow these instructions

- Make sure the phone is NOT plugged into your PC via USB.
- Turn the power off on the phone and wait for it to shut down completely.

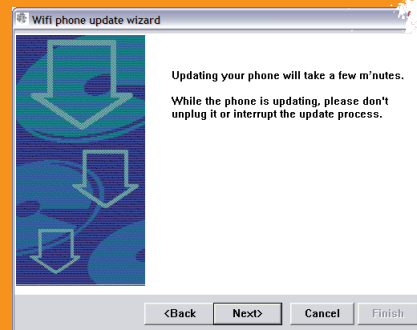

Click next

Please follow these instructions

- Please be patient, updating your phone will take a few minutes.

Click next

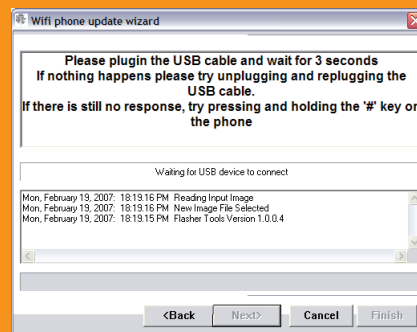

Please follow these instructions

- Plug in the USB cable and WAIT for 3 seconds.

- If your PC does not recognize the phone, please try unplugging and re-plugging in the USB cable.

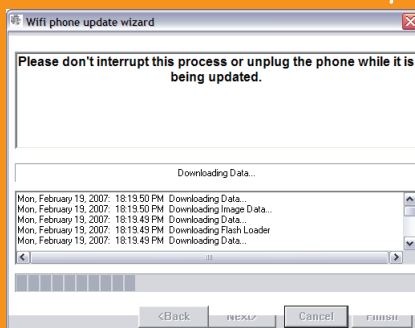

-If your computer requires you to install the software for the SMC phone, choose the one recommended. Once the process has finished, unplug and re-plug the USB cable and continue with the updating process.

- If there is still no response, try pressing and holding down the "#" key on the phone.

Please follow these instructions

- Please do not interrupt the update process or unplug the phone while it is being updated.

Congratulations!

Your phone has now been updated.
